Maya 1.7.1 — source code guide

Every source file, in reading order, grouped by the modules of the AETHER project report. 196 files, 18,095 lines. Languages: JavaScript (Node.js + React), HTML, CSS; C# and PowerShell inside src/main/services/pc.js; Windows batch files.

Start here: `start.bat` runs Maya from this folder; `install.bat` installs the latest release on another PC.

1. Voice & Interface

Speech to text (Whisper), text to speech (Kokoro, Tamil MMS), the face window (notch), the app window, hands-free control (voice commands, head mouse, keyboard, switch scanning, SOS) and their bridge to the core.

#	File	Lines	What it does
1	src/main/main.js	379	Electron entry point: creates every service, the windows, global shortcuts and timers.
2	src/main/windows.js	280	All windows: the face at the top of the screen, the app, tray, snip overlay, captions bar, head-mouse camera and voice-control layer.
3	src/preload/preload.cjs	175	The safe bridge (window.ether) between the web pages and the core.
4	src/main/ipc.js	438	Every request from the windows to the core (ask, tools, settings, models, workflows, captions, head mouse…), with the PIN-lock check.
5	src/main/speech.js	50	Speaking replies: Kokoro for Latin-script text, Windows voices for other alphabets.
6	src/main/dictation.js	35	"Type with your voice": transcribed text is pasted into whatever app has focus.
7	src/main/services/sapi.js	48	Offline Windows voices (System.Speech) for languages Kokoro cannot speak, e.g. Hindi, Russian, Chinese.
8	src/renderer/notch.html	13	Page for the face window.
9	src/renderer/notch.jsx	626	The face window: ask by text or voice, hands-free voice chat, emotions, approvals, clipboard picker.
10	src/renderer/notch.css	64	Styles of the face window at the top of the screen.
11	src/renderer/shared/voice.js	71	Hands-free voice: wait for the user to speak, notice when they stop, and detect them talking over Maya.
12	src/renderer/shared/audio.js	95	Microphone capture at 16 kHz (what Whisper expects) and speech playback with a mouth-level callback.
13	src/renderer/shared/Face.jsx	198	Maya's animated face: moods, blinking, glances, accessories.
14	src/renderer/shared/emotion.js	29	How the user seems to feel, from their words, so Maya's face can react before it answers.
15	src/renderer/shared/useAsk.js	39	Sends a question to the brain and follows the streamed answer.
16	src/renderer/shared/Markdown.jsx	37	Shows AI answers as safe Markdown (code, tables, maths).
17	src/renderer/shared/ToolResult.jsx	158	One line per action Maya took ("Added task…", "Opened Chrome…").
18	src/main/services/holdkeys.js	79	Push-to-talk like a walkie-talkie: hold Right Ctrl to give Maya a command, hold Right Alt to dictate; let go to finish.
19	src/main/services/dictate.js	56	Dictation clean-up, like a careful typist: drop "um"s, follow spoken corrections ("ten, actually fifteen"),
20	src/renderer/shared/voicecommands.js	98	Voice-only control: turns spoken commands (show numbers, click 5, scroll down, type …, yes/no, some Tamil) into actions.
21	src/main/services/voicecontrol.js	189	Carries out voice commands in the app the user is working in: numbers or grid on screen, click, scroll, keys, typing.

AETHER
Adaptive Ecosystem for Task Handling and Empowering Rehabilitation
Source code — version 1.8.0
College P.T. Lee Chengalvaraya Naicker Polytechnic College, Vepery, Chennai
Department Computer Engineering, batch 2024–2027
Team Ronald S (25508836), Ahamed Hafeez S (25508797), Harish P (25508807), Nithish S (25508826)
Project guide Er. A. Gowtham, B.Tech (IT), Lecturer

#	File	Lines	What it does
22	src/renderer/overlay.html	37	Page for the hands-free layer (numbers, grid, scanning highlight, dwell ring).
23	src/renderer/overlay.jsx	68	Click-through layer over the whole screen for hands-free control: yellow numbers on every control, a lettered grid,
24	src/renderer/app/Accessibility.jsx	212	Accessibility page: voice only, head mouse and dwell click, keyboard, switch scanning, emergency help, large mode.
25	src/main/services/scanning.js	32	Switch scanning, for people who can press only one button (or make one sound): controls light up in turn and a
26	src/main/services/keyboard.js	37	Word suggestions for the on-screen keyboard: common English words plus the words this user types (English or Tamil).
27	src/renderer/keyboard.html	31	Page for the on-screen keyboard.
28	src/renderer/keyboard.jsx	81	On-screen keyboard for people who type with a head mouse, dwell clicks or a switch. Keys go to the app with the focus
29	src/main/services/sos.js	147	Emergency SOS for people who may not be able to reach a phone: a short countdown (so a misheard word can be undone),
30	src/renderer/sos.html	27	Page for the full-screen SOS sign.
31	src/renderer/sos.jsx	62	Full-screen emergency sign: a countdown first (so a misheard "help" can be undone), then a flashing
32	src/main/services/session.js	79	Work timer: "work for 2 hours, then shut down". When time is up Maya sums up the day, says goodbye,
33	src/main/services/chatbots.js	55	"Ask ChatGPT / ask Claude ..." for people who cannot type: open the prompt in the user's own browser (where they
34	src/renderer/shared/MicButton.jsx	15	
35	src/renderer/app.html	13	Page for the app window.
36	src/renderer/app.jsx	104	The app window: sidebar sections, setup, lock screen and approvals.
37	src/renderer/app.css	231	Styles of the app window (chat, workflows, timetable, meters...).
38	src/renderer/shared/base.css	193	Shared colours, light/dark theme and face animations.
39	src/renderer/app/Chat.jsx	239	ChatGPT-style chat: conversations, model picker, files, voice, agent checklist.
40	src/renderer/app/Home.jsx	127	Home: briefing, today, coming up (classes, exams), what Maya noticed.

2. Supervisor Orchestration Core

Understands the request, picks the model, chooses tools, plans multi-step goals (Agent and Builder modes) and runs workflows.

#	File	Lines	What it does
1	src/main/brain.js	448	The brain: answers a question, calls tools in a loop, plans Agent and Builder goals, streams the reply.
2	src/main/models.js	80	Which LLM answers which question.
3	src/main/personality.js	98	Personalities from the website (Normal, Brother, Anime Girl, Butler, Italian, Russian), written for Maya.
4	src/main/providers.js	112	Every place a model can run: local (Ollama, LM Studio) or cloud (any OpenAI-compatible API).
5	src/main/ollama.js	87	Talks to Ollama: is it running, pull models, build ather-brain/ather-smart, embeddings, free the GPU.
6	src/main/tools/index.js	14	The full list of tools the AI can use.
7	src/main/tools/select.js	68	Give the model only the tools a request can need: ~60 tool descriptions confuse small models into

#	File	Lines	What it does
8	src/main/services/skills.js	63	Skills: named recipes Maya follows ("when I say goodnight, turn on dark mode and read tomorrow's tasks").
9	src/main/services/learning.js	48	Learning from the user, all on this PC: words Maya keeps mishearing, and what the user liked or did not like.
10	src/main/services/worklog.js	55	The work monitor: every action Maya takes, in plain words ("Wrote app.js", "Sent an email to Rahul"),
11	src/main/tools/maya.js	118	Teaching Maya: skills it can learn, what it is doing (the work monitor), and changing how it looks and behaves.
12	src/renderer/app/Skills.jsx	56	
13	src/renderer/app/Monitor.jsx	56	
14	src/renderer/app/Agent.jsx	127	
15	src/renderer/shared/work.js	9	The face Maya makes while a tool runs, like a person at work (exported for tests).
16	src/main/services/workflows.js	115	Runs saved routines as workflows: each step has a live state (waiting, running, awaiting approval,
17	src/renderer/app/Workflows.jsx	157	Workflows page: describe → steps → run, live node states, pause/resume/cancel/retry, history.
18	src/renderer/app/Models.jsx	123	AI models page: local and cloud providers, API keys, tests, usage.

3. Local OS & Environment Sandbox

Safe access to the PC: approved folders only, approval cards for risky actions, app opening, computer control, head mouse.

#	File	Lines	What it does
1	src/main/approvals.js	34	Ask the user in a window before a risky tool runs. Unanswered requests are denied after 5 minutes.
2	src/main/tools/dev.js	284	Built-in "MCP-style" capabilities: file manager, Git, SQLite, time, and approved commands.
3	src/main/tools/pc.js	177	PC control, routines and activity. ctx.services supplies pc and activity.
4	src/main/services/pc.js	476	PC control and activity sensing through one long-running PowerShell helper (Win32 + Core Audio via C#).
5	src/main/tools/computer.js	215	Computer control: Maya works in other apps through Windows UI Automation (named buttons and fields),
6	src/main/services/sysmon.js	52	"This PC" monitor: CPU, memory, disk, GPU (NVIDIA), battery and the busiest apps.
7	src/main/services/activity.js	73	Which apps/sites the user spends time in (local only, app/site names, never full window titles),
8	src/renderer/shared/Approvals.jsx	84	Approval cards: Maya asks before risky actions.
9	src/renderer/app/Activity.jsx	141	Activity page: time per app, This PC meters, Maya's actions on the PC.
10	src/renderer/headmouse.html	25	Page for the head-mouse camera window.
11	src/renderer/headmouse.jsx	96	Hands-free mouse: the webcam follows your head to move the cursor; open your mouth to click, smile to right-click,
12	src/renderer/shared/headpose.js	91	Head mouse maths: face landmarks → cursor position, face expressions → clicks. Pure, so it is unit tested.

4. Autonomous Engineering Sub-Agent

Writes and fixes code: file tools, the command runner and the Python code interpreter.

#	File	Lines	What it does
1	src/main/services/python.js	83	Code interpreter: runs AI-written Python (after the user approves) in a per-conversation work folder.
2	src/main/services/files.js	102	Makes real Office/PDF files from AI output: PowerPoint (.pptx), Word (.docx) and PDF.
3	src/main/tools/power.js	58	Agent mode, code interpreter and file maker tools. ctx.services supplies python and files.

5. Quality Assurance (QA) Sub-Agent

Checks the Engineer's work: loads websites in a hidden browser and reports errors; runs tests.

#	File	Lines	What it does
1	src/main/services/qa.js	45	QA for websites the Builder makes: loads the page in a hidden window and reports what a tester would see.
2	scripts/e2e.mjs	312	End-to-end check of the real app with Playwright: launches Electron, talks to Maya, saves screenshots.
3	scripts/voice-e2e.mjs	85	Voice-only control, end to end, with no keyboard or mouse: spoken commands (Kokoro's voice → Whisper → command parser)
4	scripts/a11y-e2e.mjs	143	Accessibility features end to end, acting only in its own test window: the Accessibility page and large mode,
5	scripts/work-e2e.mjs	77	1.6 features end to end, with the real app but a throwaway data folder. The PC is never shut down
6	scripts/maya-e2e.mjs	121	Maya 1.7 by voice, end to end: every request is spoken with Maya's own voice, heard by Whisper, then answered
7	scripts/nlp-eval.mjs	84	Conversation-quality check: runs scripted chats through Maya and has the 9B model grade each answer.

6. GitHub & CI/CD Deployment Sub-Agent

Git and GitHub: commits, publishing to GitHub Pages (asks first), MCP servers, releases and auto-update.

#	File	Lines	What it does
1	src/main/services/mcp-client.js	127	MCP client: connects Maya to other MCP servers (stdio or HTTP) and turns their tools into Maya tools.
2	src/main/services/mcp-presets.js	67	Ready-made MCP servers. npx-based ones need Node.js on the PC (start.bat / install.bat install it).
3	src/main/services/mcp.js	51	"Connect Claude, Codex, your own agent": a local MCP server exposing Maya's tools. Localhost only.
4	src/renderer/app/Mcp.jsx	126	Connected tools (MCP servers): status, permissions, logs, add your own.
5	src/main/updater.js	31	Updates from GitHub releases (electron-updater). Quietly does nothing until a release feed is configured.
6	scripts/release.mjs	18	Publish the built installer as a GitHub release; installed copies of Maya then update themselves.
7	scripts/check-update.mjs	23	Starts the installed Maya and asks it to check GitHub for updates: node scripts/check-update.mjs

7. AI models on this PC

Local machine-learning worker: Whisper, Kokoro, CLIP, OCR, faces, background removal, upscaling, image generation.

#	File	Lines	What it does
1	src/main/ml/catalog.js	81	Every model Maya needs, where it comes from, and whether it is on disk.
2	src/main/ml/client.js	41	Main-process side of the ML utility process. Restarts it if it crashes.
3	src/main/ml/worker.js	18	ML utility process: runs core.js functions on request from the main process.
4	src/main/ml/core.js	223	Local ML models, loaded lazily. Runs inside the ML utility process (worker.js) so the UI never freezes.
5	src/main/services/imaging.js	100	Image editor (blur emails, faces, names) and local image generation (stable-diffusion.cpp + SD-Turbo).
6	src/main/services/syscheck.js	41	"Can my computer run it?": memory, graphics card, disk space and a plain verdict.
7	src/renderer/app/ModelList.jsx	56	Download list for Maya's own AI models.
8	src/renderer/app/Setup.jsx	51	First-run setup: checks the PC and downloads the models.
9	src/renderer/app/Images.jsx	142	Image tools: create, blur private details, remove background, upscale.
10	scripts/fetch-models.js	22	Download every model ahead of time: node scripts/fetch-models.js

8. Productivity

Tasks, notes, reminders, habits, focus, calendar, mail, briefing, scheduler.

#	File	Lines	What it does
1	src/main/tools/productivity.js	266	Tasks, notes, reminders, habits, focus, calendar, patterns and undo tools.
2	src/main/services/scheduler.js	58	Fires reminders and finishes focus timers. notify(title, body, kind) shows the alert.
3	src/main/services/calendar-feeds.js	42	Read-only Google / Outlook / Apple calendars through their private iCal (.ics) links.
4	src/main/services/mail.js	139	"Your inbox, sorted": read, search, reply to and tidy emails over IMAP/SMTP, and let the brain pick what needs the user.
5	src/main/services/work.js	81	Managing the user's work: email follow-ups ("remind me if Rahul doesn't reply by Friday") and the Friday weekly report.
6	src/main/services/briefing.js	110	Morning briefing, evening review and gentle nudges.
7	src/renderer/app/useData.js	23	Small helpers the app pages share (load data, call a tool, format dates).
8	src/renderer/app/Tasks.jsx	54	Tasks page.
9	src/renderer/app/Notes.jsx	59	Notes page.
10	src/renderer/app/Habits.jsx	51	Habits page with streaks.
11	src/renderer/app/Focus.jsx	51	Focus timer page.
12	src/renderer/app/Calendar.jsx	54	Calendar page.
13	src/renderer/app/Inbox.jsx	81	Inbox page: mail sorted by importance.

9. Study

PDF chat, quizzes and flashcards, lecture recorder, timetable and exam countdown.

#	File	Lines	What it does
1	src/main/services/docs.js	82	"Chat with your PDFs": extract text, split into chunks, embed, and pull the relevant parts into each answer.
2	src/main/services/study.js	58	Study tools: quizzes, flashcards and summaries from a topic, a note or a file.
3	src/main/services/lectures.js	56	Lecture recorder: live transcript in 30-second pieces, then study notes written by the smart model.
4	src/main/tools/student.js	106	Timetable, exam countdown, clipboard history, health breaks and live captions.
5	src/renderer/app/Study.jsx	209	Study page: quizzes, flashcards, summaries, lectures, timetable tabs.

#	File	Lines	What it does
6	src/renderer/app/Lectures.jsx	137	Lecture recorder with live transcript and notes.
7	src/renderer/app/Timetable.jsx	102	Weekly timetable (import from photo/PDF) and exam countdown.

10. Helpers

Memory, web, smart search, screen snip, clipboard history, live captions, health breaks, extras.

#	File	Lines	What it does
1	src/main/tools/assistant.js	78	Memory brain (save, update, forget, no secrets), screen reading and study-set tools.
2	src/main/tools/extras.js	177	Image, personality, animation and agent-step tools.
3	src/main/services/web.js	33	Web search (DuckDuckGo) and reading a web page as text.
4	src/main/services/search.js	89	Smart search: "find my photo of the beach", "the note about DBMS", "my resume file".
5	src/main/services/clipboard.js	34	Recent copied text, kept in memory only (never written to disk). Passwords and anything a password
6	src/main/services/health.js	28	Health breaks: water, 20-20-20 eye breaks and stretching, counted only in minutes the user is actually
7	src/renderer/app/Search.jsx	82	Smart search of your files and photos.
8	src/renderer/snip.html	13	Page for the screen-snip overlay.
9	src/renderer/snip.jsx	40	Drag a box on a frozen screenshot to ask about that part (Ctrl+Shift+S).
10	src/renderer/captions.html	25	Page for the live captions bar.
11	src/renderer/captions.jsx	52	Live captions of the computer's sound (videos, online classes, calls), optionally translated to English.
12	src/main/tools/everyday.js	168	Everyday voice actions (as on heynixi.app): point at things on screen, write at the cursor, teleprompter,
13	src/main/services/timers.js	41	Countdown timers ("set a timer for 10 minutes"). notify() rings and speaks when one ends; onChange(list) keeps the
14	src/renderer/prompter.html	31	
15	src/renderer/prompter.jsx	79	Teleprompter that listens: the script scrolls along as you read it aloud, and waits when you pause.
16	src/renderer/shared/prompter.js	26	Teleprompter maths: find where the reader is in the script from the last words they said.
17	src/renderer/camera.html	12	
18	src/renderer/camera.js	21	Camera eyes: one photo from the webcam, taken only when Maya is asked ("what's in front of me?", "read this paper").
19	src/main/services/interpreter.js	38	Interpreter mode: two people talk, Maya says each sentence in the other language (English ↔ another language).
20	src/main/tools/people.js	106	People and feelings: a contact book for calls and WhatsApp by voice, and a spoken diary with moods.

11. Data, security and settings

SQLite storage, encrypted secrets, PIN lock, backup, theme.

#	File	Lines	What it does
1	src/main/paths.js	12	Where Maya keeps its data, models and pictures (%APPDATA%\Maya).
2	src/main/store.js	133	SQLite database: tables, migrations, settings and undo history.

#	File	Lines	What it does
3	src/main/secrets.js	16	Passwords (e.g. the email app password) encrypted with Windows DPAPI through Electron safeStorage.
4	src/main/security.js	56	PIN lock: scrypt-hashed PIN, lock on start / Windows lock / idle, and a brute-force pause.
5	src/main/backup.js	62	Backup / restore of the user's data (database + pictures; AI models are not included, they re-download).
6	src/main/theme.js	41	Light / dark theme: Windows title bars, tray + window icons, and (installed app) the Maya shortcuts' icons.
7	src/renderer/shared/LockScreen.jsx	43	PIN lock screen.
8	src/renderer/shared/look.js	71	Theme (light/dark) and face style, shared by every component in a window.
9	src/renderer/shared/colors.js	28	"Any pill, any eyes" colour maths (no browser needed, so it is unit tested).
10	src/renderer/app/Settings.jsx	351	Settings: voice, personality, helpers, memories, security, backup, updates.
11	src/renderer/app/Appearance.jsx	152	Theme, face colours, eyes, accessories, glow and motion settings.
12	scripts/make-icon.js	41	Renders Maya's face to assets/: icon.png/.ico (purple) and icon-dark.png/.ico (black, for dark theme).
13	scripts/face-gallery.mjs	63	Renders every face mood from the real app into docs/screenshots/faces/ (for checking and the report).
14	scripts/pack-source.mjs	202	Writes the source code "in order": docs/CODE_GUIDE.md (every file, grouped by the project report's modules),
15	scripts/print-source.mjs	52	Prints docs/CODE_GUIDE.md + docs/SOURCE-LISTING.md as one PDF for the project guide: docs/Maya-source-code.pdf

12. Tests

Automatic checks (npm test). Model tests skip themselves when a model is not downloaded.

#	File	Lines	What it does
1	test/activity.test.js	62	Activity tracking and routines.
2	test/advanced.test.js	126	Chat summaries, follow-ups, memory and real-model conversation checks.
3	test/agent.test.js	125	My Maya: safe look/name/speed changes by voice, rules in the prompt, OpenAI voice request, wake word follows the name.
4	test/brain.test.js	84	Integration test against the real local Ollama + qwen3.5:4b. Skipped when Ollama is not running.
5	test/briefing.test.js	48	Daily briefing and nudges.
6	test/coding-agent.test.js	62	Acceptance test (master prompt, feature 2): the agent fixes a reproducible bug so the project's tests pass.
7	test/colors.test.js	28	
8	test/computer.test.js	73	Computer control through Windows UI Automation on a real app: Notepad.
9	test/dictate.test.js	30	
10	test/emotion.test.js	27	Face emotions from what the user says.
11	test/everyday.test.js	62	
12	test/eyes.test.js	43	
13	test/headpose.test.js	54	Head mouse maths: head direction, cursor, mouth/smile clicks.
14	test/holdkeys.test.js	48	
15	test/image-extras.test.js	50	Background removal and upscaling.
16	test/imaging.test.js	45	Real image generation + blur (slow, uses the GPU). Skipped until the models are downloaded.

#	File	Lines	What it does
17	test/integration.test.js	71	Integration: smart search, MCP agent connection, calendar feeds. Needs Ollama + downloaded models + internet.
18	test/keyboard.test.js	29	Keyboard word suggestions; passwords and codes never learned.
19	test/learning.test.js	64	Learning: misheard words fixed next time, a thumbs-down note becomes a preference, good/bad answer by voice.
20	test/lectures.test.js	43	Lecture pipeline with real models: Kokoro "teacher" audio → Whisper transcript pieces → notes → flashcards.
21	test/lite.test.js	23	
22	test/mail.test.js	155	Email: search, read, threaded reply, archive (never delete), approvals, follow-ups, weekly report; live model checks.
23	test/mcp-client.test.js	106	Real MCP servers: each must connect, list tools AND run a tool. Needs internet + Node (npx) the first time.
24	test/memory.test.js	44	Memory: survives restart, updates, deletes, refuses secrets.
25	test/ml.test.js	33	Real-model checks (slow). Skipped until the models are downloaded: node scripts/fetch-models.js
26	test/monitor.test.js	101	Work monitor in plain words, working faces, OLLAMA_HOST addresses, tool calls written as text.
27	test/pc.test.js	32	App-name matching and window descriptions.
28	test/people.test.js	75	
29	test/power.test.js	81	Python, PowerPoint/Word, approvals, code interpreter, agent mode.
30	test/productivity.test.js	68	Tasks, notes, reminders, habits, focus, undo.
31	test/prompter.test.js	20	
32	test/providers.test.js	66	Provider engine against real endpoints: Ollama's OpenAI-compatible API registered as a "custom" provider,
33	test/scanning.test.js	35	Switch scanning order: groups, controls, back step.
34	test/security.test.js	81	PIN lock, backup and restore, icons.
35	test/select.test.js	32	Which tools each request gets.
36	test/services.test.js	83	Tool names, read-only tools, scheduler, audio.
37	test/session.test.js	311	Work timer goodbye and shutdown (never real), voice wait/magnifier/pages, blink click, care reminders, emergency call, ChatGPT answer reading.
38	test/skills.test.js	51	Skills: built-ins use real tools, the right skill is picked, everyday sentences pick none, taught skills by name.
39	test/sos.test.js	62	Emergency: countdown, cancel, caregiver email, check-in hours.
40	test/student.test.js	85	Timetable, exams, class alerts, clipboard, health breaks.
41	test/voicecommands.test.js	51	Voice commands, questions left for the AI, spoken yes/no in English and Tamil.
42	test/wake.test.js	22	"Hey Maya" wake word and stop phrases.
43	test/web-voice.test.js	33	Web search through the brain + Windows voice fallback. Needs Ollama and internet.
44	test/workflows.test.js	99	Workflows: 3 real steps, cancel, pause/resume, retry, approval, schedule.

Maya 1.7.1 — full source listing

Same order as CODE_GUIDE.md.
